**RE: February 22-23, 2005 Brazos G RWPG  
Summary for Meeting Agenda Item 6.8 – WUG Water Management Strategies**

During agenda item 6.8, HDR will present a summary of the surplus/shortage calculations for each Water User Group (WUG) in the Brazos G Region. As part of this agenda item, a packet of information containing a revised summary of supplies/demands/needs and a current DRAFT Water Management Plan for each WUG will be handed out.

The summary of supplies is for informational use only, and is provided to let members see how the needs were calculated for each WUG.

The DRAFT Water Management Plans are arranged by county, with each county table listing each WUG in the county. It is important to note that if a WUG is located in multiple counties, it has been assigned to a primary county in these tables. Each of these tables contains the following information:

- The name of each WUG located in that county;
- The surplus/shortage value of each WUG; and
- The plan element and amount of supply from that element.

In some cases, alternative plans have been presented. These are labeled in the “Notes” column as alternatives. If HDR recommends one of the alternatives, this is labeled as “Recommended” in the “Notes” column.

DRAFT plans for Taylor, Jones, Johnson, Bell, Brazos, and Williamson Counties are still being developed as we coordinate with entities in those counties. Freese and Nichols, Inc. is working on plans for counties in the upper basin. Only those counties prepared by HDR will be supplied at the RWPG meeting.

This information is being provided for your review and comment. Please provide comments back to HDR Engineering.
